

GCOOS Spring Webinar Series

presents

Southern Gulf of Mexico Marine Observations, Research and Technology: Opportunities for Gulf-Wide Synergies and Cooperation

Join the Gulf of Mexico Coastal Ocean Observing System (GCOOS), Texas A&M University (TAMU) and the Society for Underwater Technology (SUT) as we invite colleagues from two major Mexican marine research consortia to share information about their basic and applied research in the southern Gulf of Mexico.

During this four-webinar series, members of the Gulf of Mexico Marine Science Research Consortium (CIGOM) and the Mexican Center for Marine Energy Innovation (CEMIE-Océano) will discuss observations, scientific contributions and innovations, as well as databases, models, human capacities and physical infrastructure.

The webinars are meant to reach a U.S. audience that may or may not be familiar with CIGOM and CEMIE-Océano — including those at federal and state agencies involved in ocean management and research, and the private sector.

- ◆ **March 3:** “Gliders, HFR and Database Management System”*
- ◆ **March 24:** “Numerical Modeling and Oil Spill Scenarios”
- ◆ **April 7:** “Environmental Baseline and Marine Biogeochemistry”
- ◆ **April 21:** “Renewable Energies and Technological Developments”

**This webinar will be 1.5 hours to allow for introductions*

Time: 9 am PT, 11 am CT, Noon ET | No Registration Required
